Rocky Enterprise Linux 9.2 Manual Pages on command 'ifcfg.8'

$ man ifcfg.8

IFCFG(8) Linux IFCFG(8)

NAME

ifcfg - simplistic script which replaces ifconfig IP management

SYNOPSIS

ifcfg [DEVICE] [command] ADDRESS [PEER]

DESCRIPTION

This manual page documents briefly the ifcfg command.

This is a simplistic script replacing one option of ifconfig , namely, IP address manage?

ment. It not only adds addresses, but also carries out Duplicate Address Detection RFC-

DHCP, sends unsolicited ARP to update the caches of other hosts sharing the interface,

adds some control routes and restarts Router Discovery when it is necessary.

IFCONFIG - COMMAND SYNTAX

DEVICE - it may have alias, suffix, separated by colon.

command

- add, delete or stop.

ADDRESS

- optionally followed by prefix length.

peer - optional peer address for pointpoint interfaces.

NOTES

This script is not suitable for use with IPv6.
