$ man XtAppGetErrorDatabaseText.3

XtAppGetErrorDatabase(3)   XT FUNCTIONS   XtAppGetErrorDatabase(3)

NAME

   XtAppGetErrorDatabase, XtAppGetErrorDatabaseText - obtain error database

SYNTAX

   #include <X11/Intrinsic.h>

   XrmDatabase *XtAppGetErrorDatabase(XtAppContext app_context);

   void XtAppGetErrorDatabaseText(XtAppContext app_context, const char *name, const char

       *type, const char *class, const char *defaultMsg, char *buffer_return, int nbytes,

       XrmDatabase database);

ARGUMENTS

 app_context

       Specifies the application context.

 buffer_return

       Specifies the buffer into which the error message is to be returned.

 class   Specifies the resource class of the error message.

database Specifies the name of the alternative database that is to be used or NULL if the

       application's database is to be used.

defaultMsg

       Specifies the default message to use.

name

type   Specifies the name and type that are concatenated to form the resource name of

       the error message.

nbytes   Specifies the size of the buffer in bytes.

DESCRIPTION

The XtAppGetErrorDatabase function returns the address of the error database. The Intrin?

sics do a lazy binding of the error database and do not merge in the database file until

the first call to XtAppGetErrorDatbaseText.

The XtAppGetErrorDatabaseText returns the appropriate message from the error database or

returns the specified default message if one is not found in the error database.
