Rocky Enterprise Linux 9.2 Manual Pages on command 'XtVaCreateArgsList.3'

$ man XtVaCreateArgsList.3

XtVaCreateArgsList(3)   XT FUNCTIONS   XtVaCreateArgsList(3)

NAME

    XtVaCreateArgsList - dynamically allocate a varargs list

SYNTAX

    #include <X11/Intrinsic.h>

    XtVarArgsList XtVaCreateArgsList(XtPointer unused, ...);

ARGUMENTS

    unused   Must be specified as NULL.

    ...   Specifies a variable parameter list of resource name and value pairs.

DESCRIPTION

    The XtVaCreateArgsList function allocates memory and copies its arguments into a single

    list pointer, which may be used with XtVaNestedList. The end of both lists is identified

    by a name entry containing NULL. Any entries of type XtVaTypedArg are copied as specified

    without applying conversions. Data passed by reference (including Strings) are not

    copied, only the pointers themselves; the caller must ensure that the data remain valid

    for the lifetime of the created varargs list. The list should be freed using XtFree when

    no longer needed.
