## Rocky Enterprise Linux 9.2 Manual Pages on command '\_\_ppc\_yield.3'

\_\_PPC\_YIELD(3)

NAME
ppc_yield,ppc_mdoio,ppc_mdoom - Hint the processor to release shared resources
SYNOPSIS
#include <sys platform="" ppc.h=""></sys>
voidppc_yield(void);
<pre>voidppc_mdoio(void);</pre>
<pre>voidppc_mdoom(void);</pre>
DESCRIPTION
These functions provide hints about the usage of resources that are shared with other pro?
cessors on the Power architecture. They can be used, for example, if a program waiting on
a lock intends to divert the shared resources to be used by other processors.
ppc_yield() provides a hint that performance will probably be improved if shared re?
sources dedicated to the executing processor are released for use by other processors.
ppc_mdoio() provides a hint that performance will probably be improved if shared re?
sources dedicated to the executing processor are released until all outstanding storage
accesses to caching-inhibited storage have been completed.
ppc_mdoom() provides a hint that performance will probably be improved if shared re?
sources dedicated to the executing processor are released until all outstanding storage
accesses to cacheable storage for which the data is not in the cache have been completed.
