Rocky Enterprise Linux 9.2 Manual Pages on command 'a2enconf.8'

$ man a2enconf.8

A2ENCONF(8)   System Manager's Manual   A2ENCONF(8)

NAME

    a2enconf, a2disconf - enable or disable an apache2 configuration file

SYNOPSIS

    a2enconf [-q|--quiet] [-m|--maintmode] [configuration]

    a2disconf [-q|--quiet] [-m|--maintmode] [-p|--purge] [configuration]

DESCRIPTION

    This manual page documents briefly the a2enconf and a2disconf commands.

    a2enconf is a script that enables the specified configuration file within the apache2 con?

    figuration. It does this by creating symlinks within /etc/apache2/conf-enabled.   Like?

    wise, a2disconf disables a specific configuration part by removing those symlinks. It is

    not an error to enable a configuration which is already enabled, or to disable one which

    is already disabled.

    Note that many configuration file may have a dependency to specific modules. Unlike mod?

    ule dependencies, these are not resolved automatically. Configuration fragments stored in

    the conf-available directory are considered non-essential or being installed and manged by

    reverse dependencies (e.g. web scripts).

OPTIONS

    -q, --quiet

        Don't show informative messages.

    -m, --maintmode

        Enables the maintainer mode, that is the program invocation is effectuated automat?

        ically by a maintainer script. This switch should not be used by end users.

-p, --purge

> When disabling a module, purge all traces of the module in the internal state data
>
> base.

EXIT STATUS

a2enconf and a2disconf exit with status 0 if all configurations are processed success?

fully, 1 if errors occur, 2 if an invalid option was used.

EXAMPLES

> a2enconf security
>
> a2disconf charset

Enables Apache security directives stored in the security configuration files, and dis?

ables the charset configuration.

FILES

/etc/apache2/conf-available

> Directory with files giving information on available configuration files.

/etc/apache2/conf-enabled

> Directory with links to the files in conf-available for enabled configuration
>
> files.
