Rocky Enterprise Linux 9.2 Manual Pages on command 'acpi_listen.8'

$ man acpi_listen.8

acpi_listen(8)   System Manager's Manual   acpi_listen(8)

NAME

    acpi_listen - ACPI event listener

SYNOPSIS

    acpi_listen [options]

DESCRIPTION

    acpid is the system-wide ACPI event catcher. acpi_listen is a simple shell-friendly tool

    which connects to acpid and listens for events. When an event occurs, acpi_listen will

    print it on stdout.

OPTIONS

    -c, --count events

        Receive up to a maximum number of ACPI events, then exit.

    -s, --socketfile filename

        This option changes the name of the UNIX domain socket which acpid opens. Default

        is /var/run/acpid.socket.

    -t, --time seconds

        Listen for the specified time in seconds, before exiting.

-v, --version

> Print version information and exit.

-h, --help

> Show help and exit.

FILES

/var/run/acpid.socket

BUGS

There are no known bugs. To file bug reports, see AUTHORS below.
