Rocky Enterprise Linux 9.2 Manual Pages on command 'apparmor.vim.5'

$ man apparmor.vim.5

APPARMOR.VIM(5)   AppArmor   APPARMOR.VIM(5)

NAME

    apparmor.vim - vim syntax highlighting file for AppArmor profiles

SYNOPSIS

    Your system may be configured to automatically use syntax highlighting for installed

    AppArmor policies. If not, you can enable syntax highlighting in a specific vim session by

    performing:

     :set syntax=apparmor

DESCRIPTION

    apparmor.vim provides syntax highlighting rules for the vim(1) text editor; the rules

    provide an easy visual method to inspect AppArmor profiles for syntax correctness and

    semantics.

    The colors indicate the relative severity of granting a specific set of privileges.

    Ranking access with colors is necessarily generic and vague, but it may help you

    understand your profiles better.

BUGS

    apparmor.vim does not properly detect dark versus light backgrounds. Patches accepted. If

    you find any bugs, please report them at <https://gitlab.com/apparmor/apparmor/-/issues>.
