$ man bdftruncate.1

bdftruncate(1)   General Commands Manual   bdftruncate(1)

NAME

   bdftruncate - generate truncated BDF font from ISO 10646-1-encoded BDF font

SYNOPSIS

   bdftruncate threshold < source.bdf > destination.bdf

DESCRIPTION

   bdftruncate allows one to generate from an ISO10646-1 encoded BDF font other ISO10646-1

   BDF fonts in which all characters above a threshold code value are stored unencoded. This

   is often desirable because the Xlib API and X11 protocol data structures used for repre?

   senting font metric information are extremely inefficient when handling sparsely populated

   fonts.

EXAMPLE

   The command

       bdftruncate 0x3200 < 6x13.bdf > 6x13t.bdf

   will generate the file 6x13t.bdf in which all glyphs with codes >= 0x3200 will only be

   stored unencoded (i.e., they are encoded at codepoint -1).
