

Linux Ubuntu 22.4.5 Manual Pages on command 'bsd-from.1'

\$ man bsd-from.1

FROM(1) BSD General Commands Manual FROM(1)

NAME

from ? print names of those who have sent mail

SYNOPSIS

from [-c] [-f file] [-s sender] [user]

DESCRIPTION

The from utility prints out the mail header lines from the invoker's mailbox.

The following options are available:

-c Just print a count of messages and exit.

-f file

The supplied file is examined instead of the invoker's mailbox. If the -f option is used, the user argument should not be used. Read from standard input if file name ?? is given.

-s sender

Only mail from addresses containing the supplied string are printed.

If user is given, the user's mailbox is examined instead of the invoker's own mailbox. (Privileges are required.)

ENVIRONMENT

MAIL If set, the location of the invoker's mailbox. Otherwise, the default is /var/mail is used.

FILES

/var/mail/*

SEE ALSO

biff(1), mail(1)
