\$ man buildah-manifest-annotate.1

buildah-manifest-annotate(1) General Commands Manual buildah-manifest-annotate(1)

NAME

buildah-manifest-annotate - Add and update information about an image to a manifest list or image index.

SYNOPSIS

buildah manifest annotate [options...] listNameOrIndexName imageManifestDigest

DESCRIPTION

Adds or updates information about an image included in a manifest list or image index.

RETURN VALUE

The list image's ID and the digest of the image's manifest.

OPTIONS

--annotation annotation=value

Set an annotation on the entry for the specified image.

--arch

Override the architecture which the list or index records as a requirement for the image.

This is usually automatically retrieved from the image's configuration information, so it is rarely necessary to use this option.

--features

Specify the features list which the list or index records as requirements for the image.

This option is rarely used.

--os

Override the OS which the list or index records as a requirement for the image. This is usually automatically retrieved from the image's configuration information, so it is

rarely necessary to use this option.

`--os-features`

Specify the OS features list which the list or index records as requirements for the image. This option is rarely used.

`--os-version`

Specify the OS version which the list or index records as a requirement for the image. This option is rarely used.

`--variant`

Specify the variant which the list or index records for the image. This option is typically used to distinguish between multiple entries which share the same architecture value, but which expect different versions of its instruction set.

EXAMPLE

```
buildah manifest annotate --arch arm64 --variant v8 mylist:v1.11
