Rocky Enterprise Linux 9.2 Manual Pages on command 'byobu-keybindings.1'

\$ man byobu-keybindings.1

byobu-keybindings(1) byobu byobu-keybindings(1)

NAME

byobu-keybindings - toggle on/off Byobu's keybindings

SYNOPSIS

byobu-keybindings

DESCRIPTION

byobu-keybindings toggles on and off Byobu's keybindings in the current tmux(1) or screen(1) session. It will only operate against the current session.

This executable is provided as an alternative to pressing <Shift>-F12, and is useful in environments where <Shift>-F12 does not work (e.g., on the Linux console TTY).

Some Byobu users toggle these keybindings when they interfere with other programs using the same keybindings (e.g., mc(1)).

SEE ALSO

screen(1), tmux(1), byobu(1), mc(1)
