C89(1)                      General Commands Manual                      C89(1)

**NAME**

c89 - ANSI (1989) C compiler

**SYNOPSIS**

c89 [-pedantic] [-pedantic-errors] [-D\_ANSI\_SOURCE] options ...

**DESCRIPTION**

Calls the C compiler (cc) with the given options , using a C language environment compatible with the -ansiC specification.

This includes proper handling of trigraphs, disabling non-ANSI compiler features (such as asm , inline , typeof , and the \$ character in identifiers), and definition of the preprocessor symbol \_\_STRICT\_ANSI\_\_ .

**SEE ALSO**

cc(1) for a description of all options.

**HISTORY**

Appeared in NetBSD 1.4 .

**BUGS**

Since c89 is a shell wrapper script to cc , compile errors are prefixed by "cc:".
