Rocky Enterprise Linux 9.2 Manual Pages on command 'check_forensic.8'

\$ man check_forensic.8

check_forensic(8) System Manager's Manual check_forensic(8)

NAME

check_forensic - tool to extract mod_log_forensic output from apache log files

SYNOPSIS

check_forensic <log_file>

DESCRIPTION

check_forensic is a simple shell script designed to help apache administrators to extract mod_log_forensic output from apache2 log files. It checks the forensic log for requests that did not complete and outputs the request log for each one.

AUTHOR

This manual page was written by Fabio M. Di Nitto <fabbione@fabbione.net>, for the Debian GNU/Linux system (but may be used by others).
