$ man cheese.1

CHEESE(1)   User Commands   CHEESE(1)

NAME

    cheese - tool to take pictures and videos from your webcam

SYNOPSIS

    cheese [option...]

DESCRIPTION

    cheese uses your webcam to take photos and videos, applies fancy special effects and lets

    you share the fun with others. It was written as part of Google's 2007 Summer of Code lead

    by daniel g. siegel and mentored by Rapha?l Slinckx. Under the hood, Cheese uses GStreamer

    to apply fancy effects to photos and videos. With Cheese it is easy to take photos of you,

    your friends, pets or whatever you want and share them with others. After the success of

    the Summer of Code, the development continued and we are still looking for people with

    nice ideas and patches ;)

INVOCATION

    cheese takes a list of options as arguments.

 Options

   --wide, -w

     Start in wide mode, with the thumbnails to the right of the video preview.

   --device=DEVICE, -d DEVICE

     Use the supplied DEVICE as the video capture device.

   --fullscreen, -f

     Start in fullscreen mode.

   --help, -h

Print brief help and exit.

--version, -v

Print the version and exit.
