Linux Ubuntu 22.4.5 Manual Pages on command 'crc32.1'

$ man crc32.1

CRC32(1)   General Commands Manual   CRC32(1)

NAME

    crc32 - compute CRC-32 checksums for the given files

SYNOPSIS

    crc32 filename [filename ...]

DESCRIPTION

    crc32 is a simple utility that calculates the CRC-32 checksum for each of the given

    files.

    Note that the CRC-32 checksum is merely used for error detection in transmission

    and storage.   It is not intended to guard against the malicious modification of

    files (i.e., it is not a cryptographic hash).

    This utility is supplied with the Archive::Zip module for Perl.

SEE ALSO

    Archive::Zip(3pm).

AUTHOR

    The Archive::Zip module was written by Ned Konz.

    This manual page was prepared by Ben Burton <bab@debian.org> for the Debian

    GNU/Linux system (but may be used by others).
