Rocky Enterprise Linux 9.2 Manual Pages on command 'cupsenable.8'

$ man cupsenable.8

cupsenable(8)   OpenPrinting   cupsenable(8)

NAME

   cupsdisable, cupsenable - stop/start printers and classes

SYNOPSIS

   cupsdisable [-E] [-U username] [-c] [-h server[:port]] [-r reason] [--hold]

   destination(s)

   cupsenable [-E] [-U username] [-c] [-h server[:port]] [--release] destination(s)

DESCRIPTION

   cupsenable starts the named printers or classes while cupsdisable stops the named printers

   or classes.

OPTIONS

   The following options may be used:

   -E   Forces encryption of the connection to the server.

   -U username

      Uses the specified username when connecting to the server.

   -c   Cancels all jobs on the named destination.

   -h server[:port]

      Uses the specified server and port.

   --hold

      Holds remaining jobs on the named printer. Useful for allowing the current job to

      complete before performing maintenance.

   -r "reason"

      Sets the message associated with the stopped state. If no reason is specified then

the message is set to "Reason Unknown".

--release

   Releases pending jobs for printing. Use after running cupsdisable with the --hold

   option to resume printing.

CONFORMING TO

   Unlike the System V printing system, CUPS allows printer names to contain any printable

   character except SPACE, TAB, "/", or "#". Also, printer and class names are not case-sen?

   sitive.

   The System V versions of these commands are disable and enable, respectively.   They have

   been renamed to avoid conflicts with the bash(1) build-in commands of the same names.

   The CUPS versions of disable and enable may ask the user for an access password depending

   on the printing system configuration. This differs from the System V versions which re?

   quire the root user to execute these commands.
