Rocky Enterprise Linux 9.2 Manual Pages on command 'dbus-cleanup-sockets.1'

$ man dbus-cleanup-sockets.1

DBUS-CLEANUP-SOCKE(1)   User Commands   DBUS-CLEANUP-SOCKE(1)

NAME

   dbus-cleanup-sockets - clean up leftover sockets in a directory

SYNOPSIS

   dbus-cleanup-sockets [DIRECTORY]

DESCRIPTION

   The dbus-cleanup-sockets command cleans up unused D-Bus connection sockets. See

   http://www.freedesktop.org/software/dbus/ for more information about the big picture.

   If given no arguments, dbus-cleanup-sockets cleans up sockets in the standard default

   socket directory for the per-user-login-session message bus; this is usually /tmp.

   Optionally, you can pass a different directory on the command line.

   On Linux, this program is essentially useless, because D-Bus defaults to using "abstract

   sockets" that exist only in memory and don't have a corresponding file in /tmp.

   On most other flavors of UNIX, it's possible for the socket files to leak when programs

   using D-Bus exit abnormally or without closing their D-Bus connections. Thus, it might be

   interesting to run dbus-cleanup-sockets in a cron job to mop up any leaked sockets. Or you

   can just ignore the leaked sockets, they aren't really hurting anything, other than

   cluttering the output of "ls /tmp"

AUTHOR

   dbus-cleanup-sockets was adapted by Havoc Pennington from linc-cleanup-sockets written by

   Michael Meeks.

BUGS

   Please send bug reports to the D-Bus mailing list or bug tracker, see

http://www.freedesktop.org/software/dbus/
