$ man deb-postinst.5

deb-postinst(5)   dpkg suite   deb-postinst(5)

NAME

    deb-postinst - package post-installation maintainer script

SYNOPSIS

    DEBIAN/postinst

DESCRIPTION

    A package can perform several post-installation actions via maintainer scripts, by

    including an executable postinst file in its control archive (i.e. DEBIAN/postinst during

    package creation).

    The script can be called in the following ways:

    postinst configure old-version

        After the package was installed.

    postinst triggered "trigger-name..."

        After the package was triggered. The list of space-separated trigger-names is passed

        as the second argument.

old-postinst abort-upgrade new-version

If prerm fails during upgrade or fails on failed upgrade.

old-postinst abort-remove

If prerm fails during removal.

postinst abort-deconfigure in-favour new-package new-version

???????[removing old-package old-version]

If prerm fails during deconfiguration of a package.

postinst abort-remove in-favour new-package new-version

If prerm fails during replacement due to conflict.
