default.pa(5)                      File Formats Manual                      default.pa(5)

**NAME**

default.pa - PulseAudio Sound Server Startup Script

**SYNOPSIS**

~/.config/pulse/default.pa

/etc/pulse/default.pa

/etc/pulse/system.pa

**DESCRIPTION**

The PulseAudio sound server interprets a configuration script on startup, which is mainly used to define the set of modules to load. When PulseAudio runs in the per-user mode and ~/.config/pulse/default.pa exists, that file is used. When PulseAudio runs in the per-user mode and that file doesn't exist, /etc/pulse/default.pa is used. When PulseAudio runs as a system service, /etc/pulse/system.pa is used.

The script should contain directives in the PulseAudio CLI language, as documented in pulse-cli-syntax(5).

The PulseAudio Developers <pulseaudio-discuss (at) lists (dot) freedesktop (dot) org>;

PulseAudio is available from <http://pulseaudio.org/>
