dhclient.leases(5) File Formats Manual dhclient.leases(5)

NAME

dhclient.leases - DHCP client lease database

DESCRIPTION

The Internet Systems Consortium DHCP client keeps a persistent database of leases that it has acquired that are still valid. The database is a free-form ASCII file containing one valid declaration per lease. If more than one declaration appears for a given lease, the last one in the file is used. The file is written as a log, so this is not an unusual occurrence.

The format of the lease declarations is described in dhclient.conf(5).

FILES

/var/lib/dhcp/dhclient.leases
