Rocky Enterprise Linux 9.2 Manual Pages on command 'docker-machine-ssh.1'

$ man docker-machine-ssh.1

podman-machine-ssh(1)()   podman-machine-ssh(1)()

NAME

   podman-machine-ssh - SSH into a virtual machine

SYNOPSIS

   podman machine ssh [name] [command [arg ...]]

DESCRIPTION

   SSH into a Podman-managed virtual machine and optionally execute a command on the virtual

   machine. Unless using the default virtual machine, the first argument must be the virtual

   machine name. The optional command to execute can then follow. If no command is provided,

   an interactive session with the virtual machine is established.

OPTIONS

  --help

   Print usage statement.

EXAMPLES

   To get an interactive session with the default virtual machine:

      $ podman machine ssh

   To get an interactive session with a VM called myvm:

      $ podman machine ssh myvm

   To run a command on the default virtual machine:

      $ podman machine ssh rpm -q podman

   To run a command on a VM called myvm:

      $ podman machine ssh myvm rpm -q podman
