Rocky Enterprise Linux 9.2 Manual Pages on command 'docker-volume-export.1'

\$ man docker-volume-export.1

podman-volume-export(1)() podman-volume-export(1)()

NAME

podman-volume-export - Exports volume to external tar

SYNOPSIS

podman volume export [options] volume

DESCRIPTION

podman volume export exports the contents of a podman volume and saves it as a tarball on the local machine. podman volume export writes to STDOUT by default and can be redirected to a file using the --output flag.

Note: Following command is not supported by podman-remote.

podman volume export [OPTIONS] VOLUME

OPTIONS

--output, -o=file

Write to a file, default is STDOUT

--help

Print usage statement

EXAMPLES

\$ podman volume export myvol --output myvol.tar
