Rocky Enterprise Linux 9.2 Manual Pages on command 'eutp.1'

\$ man eutp.1

EUTP(1) BrIAPI User's Manual EUTP(1)

NAME

eutp - EuroBraille file transferring

SYNOPSIS

eutp

DESCRIPTION

eutp lets you exchange files with a Clio terminal from EuroBraille.

COMMAND-LINE OPTIONS

None so far

RETURNED VALUE

1 error

SHELL EXPANSIONS

Beware of special chars: * and . are often expanded by your shell, hence sending files * will probably do what you want, putting every file existing in the current directory onto the terminal, but receiving files * may not do what you want: it will only get every file which already exist in the current directory, skipping those you just created on your terminal ! If you want to get every file which exist in the terminal, you should use '*' or something similar (please read your shell manual).

The same warning applies to other special chars, such as \$, ~, &, ... which should be protected by surrounding arguments by quotes (') or by using single backslashes (\) just before them (please read your shell manual).
