## Linux Ubuntu 22.4.5 Manual Pages on command 'from.1'

*$ man from.1*

FROM(1)                         BSD General Commands Manual                         FROM(1)

NAME

   from ? print names of those who have sent mail

SYNOPSIS

   from [-c] [-f file] [-s sender] [user]

DESCRIPTION

   The from utility prints out the mail header lines from the invoker's mailbox.

   The following options are available:

   -c     Just print a count of messages and exit.

   -f file

       The supplied file is examined instead of the invoker's mailbox.  If the -f

       option is used, the user argument should not be used.  Read from standard in?

       put if file name ?-? is given.

   -s sender

       Only mail from addresses containing the supplied string are printed.

   If user is given, the user's mailbox is examined instead of the invoker's own mail?

   box.  (Privileges are required.)

ENVIRONMENT

   MAIL    If set, the location of the invoker's mailbox.  Otherwise, the default in

       /var/mail is used.

FILES

   /var/mail/*

## SEE ALSO

biff(1), mail(1)
