Rocky Enterprise Linux 9.2 Manual Pages on command 'getconf.1'

$ man getconf.1

GETCONF(1)	Debian GNU/Linux	GETCONF(1)

NAME

    getconf - Query system configuration variables

SYNOPSIS

    getconf -a

    getconf [-v specification] system_var

    getconf [-v specification] path_var pathname

DESCRIPTION

    -a

        Displays all configuration variables for the current system

        and their values.

    -v

        Indicate the specification and version for which to obtain

        configuration variables.

    system_var

        A system configuration variable, as defined by sysconf(3) or

        confstr(3).

    path_var

        A system configuration variable as defined by pathconf(3). This

        must be used with a pathname.

AUTHOR

    getconf was written by Roland McGrath for the GNU C Library

    This man page was written by Ben Collins <bcollins@debian.org> for the Debian GNU/Linux

system.
