GIT-SH-I18N(1)   Git Manual   GIT-SH-I18N(1)

NAME

   git-sh-i18n - Git's i18n setup code for shell scripts

SYNOPSIS

   . "$(git --exec-path)/git-sh-i18n"

DESCRIPTION

   This is not a command the end user would want to run. Ever. This documentation is meant

   for people who are studying the Porcelain-ish scripts and/or are writing new ones.

   The 'git sh-i18n scriptlet is designed to be sourced (using .) by Git?s porcelain programs

   implemented in shell script. It provides wrappers for the GNU gettext and eval_gettext

   functions accessible through the gettext.sh script, and provides pass-through fallbacks on

   systems without GNU gettext.

FUNCTIONS

   gettext

      Currently a dummy fall-through function implemented as a wrapper around printf(1).

      Will be replaced by a real gettext implementation in a later version.

   eval_gettext

      Currently a dummy fall-through function implemented as a wrapper around printf(1) with

      variables expanded by the git-sh-i18n--envsubst(1) helper. Will be replaced by a real

      gettext implementation in a later version.
