Rocky Enterprise Linux 9.2 Manual Pages on command 'gvfsd-metadata.1'

$ man gvfsd-metadata.1

GVFSD-METADATA(1)   User Commands   GVFSD-METADATA(1)

NAME

    gvfsd-metadata - Metadata daemon for gvfs

SYNOPSIS

    gvfs-metadata [OPTION...]

DESCRIPTION

    gvfsd-metadata is a daemon acting as a write serialiser to the internal gvfs metadata

    storage. It is autostarted by GIO clients when they make metadata changes. Read operations

    are done by client-side GIO code directly, and don't require the daemon to be running.

    The gvfs metadata capabilities are used by the nautilus file manager, for example.

OPTIONS

    -h, --help

        Prints a short help text and exits.

    --version

        Shows the version number and exits.

    -r, --replace

        Replace the currently running instance.

EXIT STATUS

    On success 0 is returned, a non-zero failure code otherwise.

FILES

    $XDG_DATA_HOME/gvfs-metadata

        The directory where the gvfs metadata database files are stored
