Rocky Enterprise Linux 9.2 Manual Pages on command 'helpztags.1'

$ man helpztags.1

HELPZTAGS(1)   User Commands   HELPZTAGS(1)

NAME

    helpztags - generate the help tags file for directory

SYNOPSIS

    helpztags DIRS...

DESCRIPTION

    helpztags scans given directories for *.txt and *.txt.gz files. Each file is scanned for

    tags used in vim help files. For each directory proper tags file is generated.

    There should be at least one directory given. In other case program exits with error.

AUTHORS

    Written by Jakub Turski and Artur R. Czechowski based on idea contained in vim sources for

    its :helptags command.

REPORTING BUGS

    Please use a Debian reportbug command or procedure described at http://bugs.debian.org/.

SEE ALSO

    Read :help helptags in vim for detailed information about helptags.
