J0(3) Linux Programmer's Manual J0(3)

NAME

j0, j0f, j0l, j1, j1f, j1l, jn, jnf, jnl - Bessel functions of the first kind

SYNOPSIS

```
#include <math.h>

double j0(double x);
double j1(double x);
double jn(int n, double x);
float j0f(float x);
float j1f(float x);
float jnf(int n, float x);
long double j0l(long double x);
long double j1l(long double x);
long double jnl(int n, long double x);

Link with -lm.
```

Feature Test Macro Requirements for glibc (see feature_test_macros(7)):

j0(), j1(), jn():

```
_XOPEN_SOURCE
```

```
|| /* Since glibc 2.19: */ _DEFAULT_SOURCE
```

```
|| /* Glibc versions <= 2.19: */ _SVID_SOURCE || _BSD_SOURCE
```

j0f(), j0l(), j1f(), j1l(), jnf(), jnl():

```
_XOPEN_SOURCE >= 600
```

```
|| (_ISOC99_SOURCE && _XOPEN_SOURCE)
```

```
|| /* Since glibc 2.19: */ _DEFAULT_SOURCE
```

```
|| /* Glibc versions <= 2.19: */ _SVID_SOURCE || _BSD_SOURCE
```

DESCRIPTION

The $j_0()$ and $j_1()$ functions return Bessel functions of x of the first kind of orders 0 and 1, respectively. The $j_n()$ function returns the Bessel function of x of the first kind of order n .

The $j_0f()$, $j_1f()$, and $jnf()$, functions are versions that take and return float values.

The $j_0l()$, $j_1l()$, and $jnl()$ functions are versions that take and return long double values.

RETURN VALUE

On success, these functions return the appropriate Bessel value of the first kind for x .

If x is a NaN, a NaN is returned.

If x is too large in magnitude, or the result underflows, a range error occurs, and the return value is 0.

ERRORS

See `math_error(7)` for information on how to determine whether an error has occurred when calling these functions.

The following errors can occur:

Range error: result underflow, or x is too large in magnitude

`errno` is set to `ERANGE`.

These functions do not raise exceptions for `fetestexcept(3)`.

ATTRIBUTES

For an explanation of the terms used in this section, see `attributes(7)`.

?Interface ? Attribute ? Value ?

??

? $j_0()$, $j_0f()$, $j_0l()$? Thread safety ? MT-Safe ?

??

? $j_1()$, $j_1f()$, $j_1l()$? Thread safety ? MT-Safe ?

??

? $j_n()$, $jnf()$, $jnl()$? Thread safety ? MT-Safe ?

??

CONFORMING TO

The functions returning double conform to SVr4, 4.3BSD, POSIX.1-2001, and POSIX.1-2008.

The others are nonstandard functions that also exist on the BSDs.

BUGS

There are errors of up to $2e-16$ in the values returned by `j0()`, `j1()`, and `jn()` for values of `x` between -8 and 8.
