Rocky Enterprise Linux 9.2 Manual Pages on command 'keyring.1'

$ man keyring.1

KEYRING(1)   General Commands Manual   KEYRING(1)

NAME

   keyring - Python-Keyring command-line utility

SYNOPSIS

   keyring [get|set|del] SERVICE USERNAME

OPTIONS

   -h, --help

      Show the help message and exit.

   -p KEYRING_PATH, --keyring-path=KEYRING_PATH

      Specify path to the keyring backend to use.

   -b KEYRING_BACKEND, --keyring-backend=KEYRING_BACKEND

      Specify name of the keyring backend to use.

   --list-backends

      List the available keyring backends and exit.

   --disable

      Create a configuration file disabling keyring and exit.

DESCRIPTION

   keyring provides a way to store, lookup and delete passwords in various backends supported

   by Python-Keyring.

   Usage example:

   $ keyring set service username

   Password for 'username' in 'service':

   $ keyring get service username

password

How the SERVICE and USERNAME parameters are handled depends on the backend, with the de‐
fault Secret Service backend they are stored as item lookup attributes.
