Linux Ubuntu 22.4.5 Manual Pages on command 'lorder.1'

$ man lorder.1

LORDER(1)   BSD General Commands Manual   LORDER(1)

NAME

    lorder ? list dependencies for object files

SYNOPSIS

    lorder file ...

DESCRIPTION

    The lorder utility uses nm(1) to determine interdependencies in the list of object

    files and library archives specified on the command line. The lorder utility outputs

    a list of file names where the first file contains a symbol which is defined by the

    second file.

    The output is normally used with tsort(1) when a library is created to determine the

    optimum ordering of the object modules so that all references may be resolved in a

    single pass of the loader.

    When linking static binaries, lorder and tsort(1) can be used to properly order li?

    brary archives automatically.

ENVIRONMENT

    NM   Path to the nm(1) binary, defaults to ?nm?.

    NMFLAGS

       Flags to pass to nm(1).

EXAMPLES

      ar cr library.a `lorder ${OBJS} | tsort`

      cc -o foo ${OBJS} `lorder ${STATIC_LIBS} | tsort`

SEE ALSO

ar(1), ld(1), nm(1), ranlib(1), tsort(1)

HISTORY

A lorder utility appeared in Version 7 AT&T UNIX.
