Rocky Enterprise Linux 9.2 Manual Pages on command 'lzmore.1'

\$ man lzmore.1

XZMORE(1) XZ Utils XZMORE(1)

NAME

xzmore, lzmore - view xz or lzma compressed (text) files

SYNOPSIS

xzmore [file...]

lzmore [file...]

DESCRIPTION

xzmore is a filter which allows examination of xz(1) or lzma(1) compressed text files one screenful at a time on a soft-copy terminal.

To use a pager other than the default more, set environment variable PAGER to the name of the desired program. The name lzmore is provided for backward compatibility with LZMA Utils.

e or q When the prompt --More--(Next file: file) is printed, this command causes xzmore to exit.

s When the prompt --More--(Next file: file) is printed, this command causes xzmore to skip the next file and continue.

For list of keyboard commands supported while actually viewing the content of a file, refer to manual of the pager you use, usually more(1).
