Rocky Enterprise Linux 9.2 Manual Pages on command 'npm-help.1'

$ man npm-help.1

NPM-HELP(1)   NPM-HELP(1)

NAME

    npm-help - Get help on npm

Synopsis

    npm help <term> [<terms..>]

    Note: This command is unaware of workspaces.

Description

    If supplied a topic, then show the appropriate documentation page.

    If the topic does not exist, or if multiple terms are provided, then npm will run the

    help-search command to find a match. Note that, if help-search finds a single subject,

    then it will run help on that topic, so unique matches are equivalent to specifying a

    topic name.

Configuration

    <!-- AUTOGENERATED CONFIG DESCRIPTIONS START --> <!-- automatically generated, do not edit

    manually --> <!-- see lib/utils/config/definitions.js -->

viewer

    ? Default: "man" on Posix, "browser" on Windows

    ? Type: String

    The program to use to view help content.

    Set to "browser" to view html help content in the default web browser. <!-- automatically

    generated, do not edit manually --> <!-- see lib/utils/config/definitions.js -->

    <!-- AUTOGENERATED CONFIG DESCRIPTIONS END -->
