Rocky Enterprise Linux 9.2 Manual Pages on command 'npm-root.1'

$ man npm-root.1

NPM-ROOT(1)   NPM-ROOT(1)

NAME

    npm-root - Display npm root

Synopsis

    npm root [-g]

Description

    Print the effective node_modules folder to standard out.

    Useful for using npm in shell scripts that do things with the node_modules folder. For

    example:

    #!/bin/bash

    global_node_modules="$(npm root --global)"

    echo "Global packages installed in: ${global_node_modules}"

Configuration

    <!-- AUTOGENERATED CONFIG DESCRIPTIONS START --> <!-- automatically generated, do not edit

    manually --> <!-- see lib/utils/config/definitions.js -->

global

    ? Default: false

    ? Type: Boolean

    Operates in "global" mode, so that packages are installed into the prefix folder instead

    of the current working directory. See npm help folders for more on the differences in be?

    havior.

    ? packages are installed into the {prefix}/lib/node_modules folder, instead of the current

    working directory.

- bin files are linked to {prefix}/bin

- man pages are linked to {prefix}/share/man

<!-- automatically generated, do not edit manually --> <!-- see lib/utils/config/defini?

tions.js -->
