Rocky Enterprise Linux 9.2 Manual Pages on command 'ntfscluster.8'

$ man ntfscluster.8

NTFSCLUSTER(8)   System Manager's Manual   NTFSCLUSTER(8)

NAME

   ntfscluster - identify files in a specified region of an NTFS volume.

SYNOPSIS

   ntfscluster [options] device

DESCRIPTION

   ntfscluster has three modes of operation: info, sector and cluster.

 Info

   The default mode, info is currently not implemented. It will display general information

   about the NTFS volume when it is working.

 Sector

   The sector mode will display a list of files that have data in the specified range of sec?

   tors.

 Cluster

   The cluster mode will display a list of files that have data in the specified range of

   clusters. When the cluster size is one sector, this will be equivalent to the sector mode

   of operation.

OPTIONS

   Below is a summary of all the options that ntfscluster accepts. Nearly all options have

   two equivalent names. The short name is preceded by - and the long name is preceded by

   --. Any single letter options, that don't take an argument, can be combined into a single

   command, e.g. -fv is equivalent to -f -v. Long named options can be abbreviated to any

   unique prefix of their name.

-c, --cluster RANGE

    Any files whose data is in this range of clusters will be displayed.

-F, --filename NAME

    Show information about this file.

-f, --force

    This will override some sensible defaults, such as not working with a mounted vol?

    ume. Use this option with caution.

-h, --help

    Show a list of options with a brief description of each one.

-I, --inode NUM

    Show information about this inode.

-i, --info

    This option is not yet implemented.

-q, --quiet

    Reduce the amount of output to a minimum. Naturally, it doesn't make sense to com?

    bine this option with --verbose

-s, --sector RANGE

    Any files whose data is in this range of sectors will be displayed.

-v, --verbose

    Increase the amount of output that ntfscluster prints.

-V, --version

    Show the version number, copyright and license for ntfscluster.

EXAMPLES

    Get some information about the volume /dev/hda1.

        ntfscluster /dev/hda1

    Look for files in the first 500 clusters of /dev/hda1.

        ntfscluster -c 0-500 /dev/hda1

BUGS

    The info mode isn't implemented yet. ntfscluster is quite limited, but it has no known

    bugs. If you find a bug please send an email describing the problem to the development

    team:

    ntfs-3g-devel@lists.sf.net

AUTHORS

ntfscluster was written by Richard Russon, with contributions from Anton Altaparmakov. It
was ported to ntfs-3g by Erik Larsson.

AVAILABILITY

ntfscluster is part of the ntfs-3g package and is available from:

https://github.com/tuxera/ntfs-3g/wiki/
