Linux Ubuntu 22.4.5 Manual Pages on command 'ntp-wait.8'

$ man ntp-wait.8

NTP_WAIT(8)   BSD System Manager's Manual   NTP_WAIT(8)

NAME

   ntp-wait ? Wait for ntpd to stabilize the system clock

SYNOPSIS

   ntp-wait [-flags] [-flag [value]] [--option-name[[=|]value]]

        All arguments must be options.

DESCRIPTION

   ntp-wait will send at most num-tries queries to ntpd(8), sleeping for

   secs-between-tries after each status return that says ntpd(8) has not yet produced a

   synchronized and stable system clock.

   ntp-wait will do this quietly, unless the -v flag is provided. This can be useful at

   boot time, to delay the boot sequence until after ntpd -g has set the time.

OPTIONS

   -n number, --tries=number

      Number of times to check ntpd. This option takes an integer number as its

      argument. The default number for this option is:

         100

           The maximum number of times we will check ntpd to see if

           it has been able to synchronize and stabilize the system clock.

   -s secs-between-tries, --sleep=secs-between-tries

      How long to sleep between tries. This option takes an integer number as its

      argument. The default secs-between-tries for this option is:

6

   We will sleep for secs-between-tries after each query

   of ntpd that returns "the time is not yet stable".

-v, --verbose

   Be verbose.

      By default, ntp-wait is silent.

      With this option, ntp-wait will provide status information.

-?, --help

   Display usage information and exit.

-!, --more-help

   Pass the extended usage information through a pager.

-v [{v|c|n --version [{v|c|n}]}]

   Output version of program and exit. The default mode is `v', a simple ver?

   sion. The `c' mode will print copyright information and `n' will print the

   full copyright notice.

EXIT STATUS

One of the following exit values will be returned:

0 (EXIT_SUCCESS)

   Successful program execution.

1 (EXIT_FAILURE)

   The operation failed or the command syntax was not valid.

70 (EX_SOFTWARE)

   libopts had an internal operational error. Please report it to auto?

   gen-users@lists.sourceforge.net. Thank you.
