Rocky Enterprise Linux 9.2 Manual Pages on command 'pam_loginuid.8'

$ man pam_loginuid.8

PAM_LOGINUID(8)   Linux-PAM Manual   PAM_LOGINUID(8)

NAME

   pam_loginuid - Record user's login uid to the process attribute

SYNOPSIS

   pam_loginuid.so [require_auditd]

DESCRIPTION

   The pam_loginuid module sets the loginuid process attribute for the process that was

   authenticated. This is necessary for applications to be correctly audited. This PAM module

   should only be used for entry point applications like: login, sshd, gdm, vsftpd, crond and

   atd. There are probably other entry point applications besides these. You should not use

   it for applications like sudo or su as that defeats the purpose by changing the loginuid

   to the account they just switched to.

OPTIONS

   require_auditd

      This option, when given, will cause this module to query the audit daemon status and

      deny logins if it is not running.

MODULE TYPES PROVIDED

   Only the session module type is provided.

RETURN VALUES

PAM_SUCCESS

The loginuid value is set and auditd is running if check requested.

PAM_IGNORE

The /proc/self/loginuid file is not present on the system or the login process runs

inside uid namespace and kernel does not support overwriting loginuid.

PAM_SESSION_ERR

Any other error prevented setting loginuid or auditd is not running.

EXAMPLES

```
#%PAM-1.0

auth       required     pam_unix.so

auth       required     pam_nologin.so

account    required     pam_unix.so

password   required     pam_unix.so

session    required     pam_unix.so

session    required     pam_loginuid.so
```
