## Rocky Enterprise Linux 9.2 Manual Pages on command 'pasuspender.1'

**$ man pasuspender.1**

pasuspender(1)                  General Commands Manual                  pasuspender(1)

NAME

   pasuspender - Temporarily suspend PulseAudio

SYNOPSIS

   pasuspender [options] -- PROGRAM [ARGUMENTS ...]

   pasuspender --help

   pasuspender --version

DESCRIPTION

   pasuspender  is  a tool that can be used to tell a local PulseAudio sound server to tempo?

   rarily suspend access to the audio devices, to allow other applications  access  them  di?

   rectly.  pasuspender  will  suspend access to the audio devices, fork a child process, and

   when the child process terminates, resume access again.

   Make sure to include -- in your pasuspender command line  before  passing  the  subprocess

   command  line (as shown above). Otherwise pasuspender itself might end up interpreting the

   command line switches and options you intended to pass to the subprocess.

OPTIONS

   -h | --help

       Show help.

   --version

       Show version information.

   -s | --server=SERVER

       Specify the sound server to connect to.
