Rocky Enterprise Linux 9.2 Manual Pages on command 'pdf2dsc.1'

$ man pdf2dsc.1

PDF2DSC(1)   Ghostscript Tools   PDF2DSC(1)

NAME

    pdf2dsc - generate a PostScript page list of a PDF document

SYNOPSIS

    pdf2dsc input.pdf [output.dsc]

DESCRIPTION

    pdf2dsc uses gs(1) to read an Adobe Portable Document Format (PDF) document "input.pdf"

    and create a PostScript(tm) document "output.dsc" that conforms to Adobe's Document Struc?

    turing Conventions (DSC) requirements.

    This new document simply tells Ghostscript to read the PDF file and to display pages one

    at a time. The generated document can then be viewed with any PostScript viewer based on

    Ghostscript, like ghostview(1) on Unix or GSview on Windows, with which the user can

    browse through the pages of the PDF document in any order.

    If no output file is named on the command line, the name of the output file is that of the

    input file with any extension removed, followed by the extension ".dsc".

CAVEATS

    The DSC document uses Ghostscript-specific procedures. In addition, the original PDF doc?

    ument must be accessible when the DSC document is processed.

    You need the file "pdf2dsc.ps" (originally by Russell Lang) supplied with Ghostscript

    since release 3.53.

SEE ALSO

    gs(1), ghostview(1)

VERSION

This document was last revised for Ghostscript version 9.55.0.
