Rocky Enterprise Linux 9.2 Manual Pages on command 'podman-diff.1'

$ man podman-diff.1

podman-diff(1)()   podman-diff(1)()

NAME

    podman-diff - Inspect changes on a container or image's filesystem

SYNOPSIS

    podman diff [options] container|image [container|image]

DESCRIPTION

    Displays changes on a container or image's filesystem. The container or image will be

    compared to its parent layer or the second argument when given.

    The output is prefixed with the following symbols:

    ???

    ?Symbol ? Description   ?

    ???

    ?A   ? A file or directory was added.   ?

    ???

    ?D   ? A file or directory was deleted. ?

    ???

    ?C   ? A file or directory was changed. ?

    ???

OPTIONS

  --format

    Alter the output into a different format. The only valid format for podman diff is json.

  --latest, -l

    Instead of providing the container name or ID, use the last created container. If you use

methods other than Podman to run containers such as CRI-O, the last started container could be from either of those methods. (This option is not available with the remote Pod?man client)

EXAMPLE

```
$ podman diff container1
A /myscript.sh
$ podman diff --format json myimage
{
  "changed": [
    "/usr",
    "/usr/local",
    "/usr/local/bin"
  ],
  "added": [
    "/usr/local/bin/docker-entrypoint.sh"
  ]
}
$ podman diff container1 image1
A /test
```
