Rocky Enterprise Linux 9.2 Manual Pages on command 'podman-machine-list.1'

\$ man podman-machine-list.1

podman-machine-ls(1)() podman-machine-ls(1)()

NAME

podman-machine-list - List virtual machines

SYNOPSIS

podman machine list [options]

podman machine ls [options]

DESCRIPTION

List Podman managed virtual machines.

Podman on macOS requires a virtual machine. This is because containers are Linux - containers do not run on any other OS because containers' core functionality is tied to the Linux kernel.

OPTIONS

--format=format

Format list output using a Go template.

Valid placeholders for the Go template are listed below:

??

?Placeholder ? Description ?

??

?Name ? VM name ?

??

?Created ? Time since VM creation ?

??

?LastUp ? Time since the VM was last run ?

??

?.VMType ? VM type ?

??

--help

Print usage statement.

--noheading

Omit the table headings from the listing of pods.

EXAMPLES

\$ podman machine list

\$ podman machine ls --format {{.Name}}\t{{.VMType}}\t{{.Created}}\t{{.LastUp}}\n
