$ man podman-network-reload.1

podman-network-reload(1)()   podman-network-reload(1)()

NAME

    podman-network-reload - Reload network configuration for containers

SYNOPSIS

    podman network reload [options] [container...]

DESCRIPTION

    Reload one or more container network configurations.

    Rootfull Podman relies on iptables rules in order to provide network connectivity. If the

    iptables rules are deleted, this happens for example with firewall-cmd --reload, the con?

    tainer loses network connectivity. This command restores the network connectivity.

OPTIONS

  --all, -a

    Reload network configuration of all containers.

  --latest, -l

    Instead of providing the container name or ID, use the last created container. If you use

    methods other than Podman to run containers such as CRI-O, the last started container

    could be from either of those methods. (This option is not available with the remote Pod?

    man client)

EXAMPLE

    Reload the network configuration after a firewall reload.

        # podman run -p 80:80 -d nginx

        b1b538e8bc4078fc3ee1c95b666ebc7449b9a97bacd15bcbe464a29e1be59c1c

        # curl 127.0.0.1

works

sudo firewall-cmd --reload

success

curl 127.0.0.1

hangs

podman network reload b1b538e8bc40

b1b538e8bc4078fc3ee1c95b666ebc7449b9a97bacd15bcbe464a29e1be59c1c

curl 127.0.0.1

works

Reload the network configuration for all containers.

podman network reload --all

b1b538e8bc4078fc3ee1c95b666ebc7449b9a97bacd15bcbe464a29e1be59c1c

fe7e8eca56f844ec33af10f0aa3b31b44a172776e3277b9550a623ed5d96e72b
