Rocky Enterprise Linux 9.2 Manual Pages on command 'podman-volume-inspect.1'

\$ man podman-volume-inspect.1

podman-volume-inspect(1)() podman-volume-inspect(1)()

NAME

podman-volume-inspect - Get detailed information on one or more volumes

SYNOPSIS

podman volume inspect [options] volume [...]

DESCRIPTION

Display detailed information on one or more volumes. The output can be formatted using the --format flag and a Go template. To get detailed information about all the existing volumes, use the --all flag. Volumes can be queried individually by providing their full name or a unique partial name.

OPTIONS

--all, -a

Inspect all volumes.

--format=format, -f

Format volume output using Go template

--help

Print usage statement

EXAMPLES

\$ podman volume inspect myvol

\$ podman volume inspect --all

\$ podman volume inspect --format "{{.Driver}} {{.Scope}}" myvol
