Rocky Enterprise Linux 9.2 Manual Pages on command 'ppdi.1'

$ man ppdi.1

ppdi(1)   OpenPrinting   ppdi(1)

NAME

    ppdi - import ppd files (deprecated)

SYNOPSIS

    ppdi [-I include-directory] [-o source-file] ppd-file [... ppd-file]

DESCRIPTION

    ppdi imports one or more PPD files into a PPD compiler source file. Multiple languages of

    the same PPD file are merged into a single printer definition to facilitate accurate

    changes for all localizations. This program is deprecated and will be removed in a future

    release of CUPS.

OPTIONS

    ppdi supports the following options:

    -I include-directory

        Specifies an alternate include directory. Multiple -I options can be supplied to add

        additional directories.

    -o source-file

        Specifies the PPD source file to update. If the source file does not exist, a new

        source file is created. Otherwise the existing file is merged with the new PPD

        file(s) on the command-line. If no source file is specified, the filename ppdi.drv

        is used.

NOTES

    PPD files are deprecated and will no longer be supported in a future feature release of

    CUPS. Printers that do not support IPP can be supported using applications such as

ippeveprinter(1).
