Rocky Enterprise Linux 9.2 Manual Pages on command 'precat.1'

\$ man precat.1

PREZIP(1) Aspell Abbreviated User's Manual PREZIP(1)

NAME

prezip, preunzip, precat - prefix delta compressor for Aspell

SYNOPSIS

precat [-dzhLV] [-cfksSq] [file ...]

DESCRIPTION

prezip is a prefix delta compressor. It is not a general purpose compressor and should only be used on sorted word lists or other similar text files. It will likely increase the size of binary data.

If invoked as prezip, the default action is to compress. If invoked as preunzip, the default action is to decompress. If invoked as precat, the default action is to decompress to stdout.

If no file names are given then prezip will compress or decompress from the standard input to the standard output. Short flags can be combined so that "-c -s" is the same as "-cs".

OPTIONS

-h --help

display help

-d --decompress

force decompression

-z --compress

force compression

-L --license

display software license

-V --version

display version

-c --stdout

decompress to standard output

-f --force

force

-k --keep

keep input files

-s --sort

sort and remove duplicates before compressing

-S --nocwl

do not rename .wl suffix to .cwl (use .wl.pz instead)

-q --quiet

suppress all warnings
