## Rocky Enterprise Linux 9.2 Manual Pages on command 'preunzip.1'

*$ man preunzip.1*

PREZIP(1)                     Aspell Abbreviated User's Manual                     PREZIP(1)

NAME

    prezip, preunzip, precat -  prefix delta compressor for Aspell

SYNOPSIS

    precat [-dzhLV] [-cfksSq] [file ...]

DESCRIPTION

    prezip  is a a prefix delta compressor.  It is not a general purpose compressor and should

    only be used on sorted word lists or other similar text files.  It  will  likely  increase

    the size of binary data.

    If  invoked as prezip, the default action is to compress.  If invoked as preunzip, the de?

    fault action is to decompress.  If invoked as precat, the default action is to  decompress

    to stdout.

    If no file names are given then prezip will compress or decompress from the standard input

    to the standard output.  Short flags can be combined so that "-c -s" is the same as "-cs".

OPTIONS

    -h --help

        display help

    -d --decompress

        force decompression

    -z --compress

        dorce compression

    -L --license

        display software license
