Rocky Enterprise Linux 9.2 Manual Pages on command 'regulatory.bin.5'

$ man regulatory.bin.5

regulatory.bin(5)   Linux   regulatory.bin(5)

NAME

    regulatory.bin, regulatory.db - The Linux wireless regulatory database

Description

    regulatory.bin and regulatory.db are the files used by the Linux wireless subsystem to

    keep its regulatory database information.

    regulatory.bin is read by crda upon the Linux kernel's request for regulatory information

    for a specific ISO / IEC 3166 alpha2 country code.

    regulatory.db is a newer, extensible database format which (since Linux 4.15) is read by

    the kernel directly as a firmware file.

    The regulatory database is kept in a small binary format for size and code efficiency. The

    regulatory.bin file can be parsed and read in human format by using the regdbdump command.

    The regulatory database files should be updated upon regulatory changes or corrections.

Upkeeping

    The regulatory database is maintained by the community as such you are encouraged to send

    any corrections or updates to the linux-wireless and wireless-regdb mailing lists: linux-

    wireless@vger.kernel.org and wireless-regdb@lists.infradead.org
