Rocky Enterprise Linux 9.2 Manual Pages on command 'rhythmbox-client.1'

$ man rhythmbox-client.1

rhythmbox(1)   General Commands Manual   rhythmbox(1)

NAME

   rhythmbox-client - controls a running instance of rhythmbox

SYNOPSIS

   rhythmbox-client [option...][file...]

DESCRIPTION

   rhythmbox-client is a tool for controlling an already running instance of rhythmbox. It's

   useful for remote control scripting, adding specific files to the library from the shell,

   or printing details of what's playing. It also has an interactive mode, useful for con?

   trolling playback remotely via ssh. Any files specified after the option arguments will be

   added to the library. If the --enqueue option is given, the files will also be added to

   the play queue.

OPTIONS

   -?,--help

       Show help options

   --debug

       Enable debug output

   --no-start

       Do not start a new instance of rhythmbox

   --quit Quit rhythmbox

   -i,--interactive

       Start interactive mode --no-present Don't present an existing rhythmbox window

   --next Jump to next song

--previous

 Jump to previous song

--play Resume playback if currently paused

--pause

 Pause playback if currently playing

--play-pause

 Toggle play/pause mode

--stop Stop playback if currently playing

--play-uri=URI

 Play a specified URI, importing it if necessary

--enqueue

 Add specified tracks already in the library to the play queue

--clear-queue

 Empty the play queue before adding new tracks

--print-playing

 Print the title and artist of the playing song

--print-playing-format=format

 Print formatted details of the song (see FORMAT OPTIONS below).

--set-volume

 Set the playback volume

--volume-up

 Increase the playback volume

--volume-down

 Decrease the playback volume

--print-volume

 Print the current playback volume

--select-source=URI

 Select the source corresponding to a URI (device or mount point)

--activate-source=URI

 Select the source corresponding to a URI (device or mount point) and start playing

 from it if not already playing.

--play-source=URI

 Select the source corresponding to a URI (device or mount point) and start playing

from it.

FORMAT OPTIONS

%at   album title

%aa   album artist

%aA   album artist (lowercase)

%as   album artist sortname

%aS   album artist sortname (lowercase)

%ay   album year

%ag   album genre

%aG   album genre (lowercase)

%an   album disc number

%aN   album disc number, zero padded

%st   stream title

%tn   track number (i.e 8)

%tN   track number, zero padded (i.e 08)

%tt   track title

%ta   track artist

%tA   track artist (lowercase)

%ts   track artist sortname

%tS   track artist sortname (lowercase)

%td   track duration

%te   track elapsed time

Variables can be combined using quotes. For example "%tn %aa %tt", will print the track

number followed by the artist and the title of the track.
