Rocky Enterprise Linux 9.2 Manual Pages on command 'rpm2archive.8'

$ man rpm2archive.8

RPM2ARCHIVE(8)   RPM2ARCHIVE(8)

NAME

   rpm2archive - Create tar archive from RPM Package Manager (RPM) package.

SYNOPSIS

   rpm2archive {-n|--nocompression} FILES

DESCRIPTION

   rpm2archive converts the .rpm files specified as arguments to tar files. By default they

   are gzip compressed and saved with postfix ".tgz".

   If '-' is given as argument, an rpm stream is read from standard in and written to stan?

   dard out.

   In opposite to rpm2cpio rpm2archive also works with RPM packages containing files greater

   than 4GB which are not supported by cpio. Unless rpm2cpio rpm2archive needs a working rpm

   installation which limits its usefulness for some disaster recovery scenarios.

OPTIONS

   -n, --nocompression

       Generate uncompressed tar archive and use ".tar" as postfix of the file name.

EXAMPLES

rpm2archive glint-1.0-1.i386.rpm ; tar -xvz glint-1.0-1.i386.rpm.tgz

cat glint-1.0-1.i386.rpm | rpm2archive - | tar -tvz
