Linux Ubuntu 22.4.5 Manual Pages on command 'runc-events.8'

$ man runc-events.8

runc-events (8"")   runc-events (8"")

NAME

    runc-events - display container events and statistics.

SYNOPSIS

    runc events [option ...] container-id

DESCRIPTION

    The events command displays information about the container. By default, it works

    continuously, displaying stats every 5 seconds, and container events as they occur.

OPTIONS

    --interval time : Set the stats collection interval. Default is 5s.

    --stats : Show the container's stats once then exit.

SEE ALSO

    runc(8).
